**Software for material and tool
management**

Release notes – version 4.1

MIRA Software is a product of **IZIT bv**
Dokter Armand Rubbensstraat 1
9240 Zele

RELEASE NOTES

1. New features

- Extension of maintenance in the mobile application.
- Extension for documents and images (a.o. document tags).

2. Improvements

- Tooltip added when moving a checkout. Tooltip now indicates that it is about changing the use location of the loaned equipment.
- Columns for work orders removed.
- The screen for filling in a form now scales with its content (to maximum value).
- Clear message when a form is linked to articles or maintenance conditions.
- It is now possible to import a packaging item.
- Removed the button for importing companies from the warning screen during initial configuration of MIRA.
- Tooltip added for transferring a checkout.
- Validation is now done on the character format of import files. This is to prevent special characters such as é, è, ö, ... will be lost during import.
- Added column in consultation screen for loans to indicate whether a loan is part of a loan of a composite item.
- Translation of "Quantity" was missing from the screen for composing an article.
- The comments of an article are now shown when lending or returning.
- Values from import files are now trimmed. Spaces before and after words are removed. This could lead to incorrect imports of data.
- It is possible to indicate whether the status of a lot number may be overwritten automatically.
- When editing a user, the fields 'password' and 'repeat password' are no longer empty.
- It is possible to set an expiration time (in days) for passwords.
- Users can now change their own password when they are logged in.
- New search screen for stock in the checkout screen. It makes it possible to lend out several articles (with the desired number for stock) in 1 move.
- Setting for taking over the remarks of articles or stock in the remarks of reservation details.
- If a lot number has only one maintenance condition configured, it is now possible to send it directly to maintenance. It is no longer necessary to select the maintenance condition first.

RELEASE NOTES

- It is possible to configure a unit on article level.
- Columns have been added for 'code stock status' and 'code usage location' in checkin/out and its consultation.

3. Fixed bugs

- Fixed bug where a sub-location could not be selected when returning material.
- Fixed bug where the consultation screen already shows rows when no data is visible yet.
- Fixed a bug where forms that were filled out when placing in transit, were not visible in the forms consultation screen.
- Fixed a bug where the settings screen had a print button.
- Fixed a bug where the week type was lost when transferring a checkout.
- Fixed bug where the same form was displayed twice when linked to the item and to a maintenance condition linked to the item.
- Fixed bug where multilingual descriptions were not correctly worked out on first creation.
- Fixed bug where validation messages were displayed twice when the password of a user was changed.
- Fixed a bug where not all buttons were visible in the main menu when the screen resolution is too low.
- Fixed a bug where it was possible to remove units of measurement from the system.
- Fixed a bug where it was not possible to delete a checkout that had been transferred.
